

“Side Keeper” Carriage Mounted Load Stabilisers

The carriage mounted “side keepers” are the perfect attachment when you need to stabilise un-steady loads, and ensure they stay situated centrally on the forks of the truck.

The “side keepers” are fitted with latched top blocks and simply fit onto the forklift truck carriage in exactly the same way as a pair of forks.

Manufactured to your specific requirements, the “side keeper” can be quickly fitted and removed when needed, ensuring you are always covered when moving awkward loads.

Simply let us know your carriage class, and the length of “side keeper” you require, and we will design a customer pair for you. The units can also be supplied to suit quick hitch telehandlers and can also be fitted with location points on the frames for fitting ratchets and straps, allowing the user to fully secure the load to the forklift.
