ABOVE YOUR EXPECTATIONS

Davicon is the UK's leading manufacturer of mezzanine floors and unlike many suppliers we manufacture all of our floors in-house.

In fact, we have the largest dedicated mezzanine floor production facility in the UK so you can be confident of consistently high quality product, swift lead times and competitive pricing.

We employ our own design & project management teams with extensive experience of delivering large and small; simple and complex mezzanine floor solutions. And where difficult or technical issues require we have our own fully qualified structural engineers on hand to find the correct solution for you.

Rapid and professional installation of our floors is carried out by Davicon's accredited teams of installers who work across the UK.

FINDING ROOM TO GROW

Retail

Mezzanine floors are increasingly used to create additional space within a retail unit. Davicon floors are ideal for increasing sales floor and display areas on the same or on tiered levels. Working to a fast track programme we'll ensure your retail floor is brought into productive use as soon as possible with minimal disruption. Davicon has supplied floors to some of the largest names on the high street including, Marks & Spencer, John Lewis, House of Fraser, SCS, Halfords and Sainsbury's.

Office, Production & Storage

Releasing dead or unused space by installing a mezzanine floor is often the ideal solution for companies needing to expand or consolidate its operations without the expense and disruption of relocating the business. The additional space can be used to accommodate offices as well as offering increased storage and production space.

The secret to unlocking the wasted space most efficiently lies in good design and ensuring the mezzanine floor is specified most appropriately for its intended use.

GOING UP IN THE WORLD

Warehousing & Distribution

Davicon are specialists in the design, manufacture and installation of mezzanine floors for large warehouses and distribution centre applications. Our single, two and three-tier systems have been installed at some of the UK's largest sites. Each floor incorporates full fire protection, safety barriers and access equipment as required.

Decking available to suit specific applications

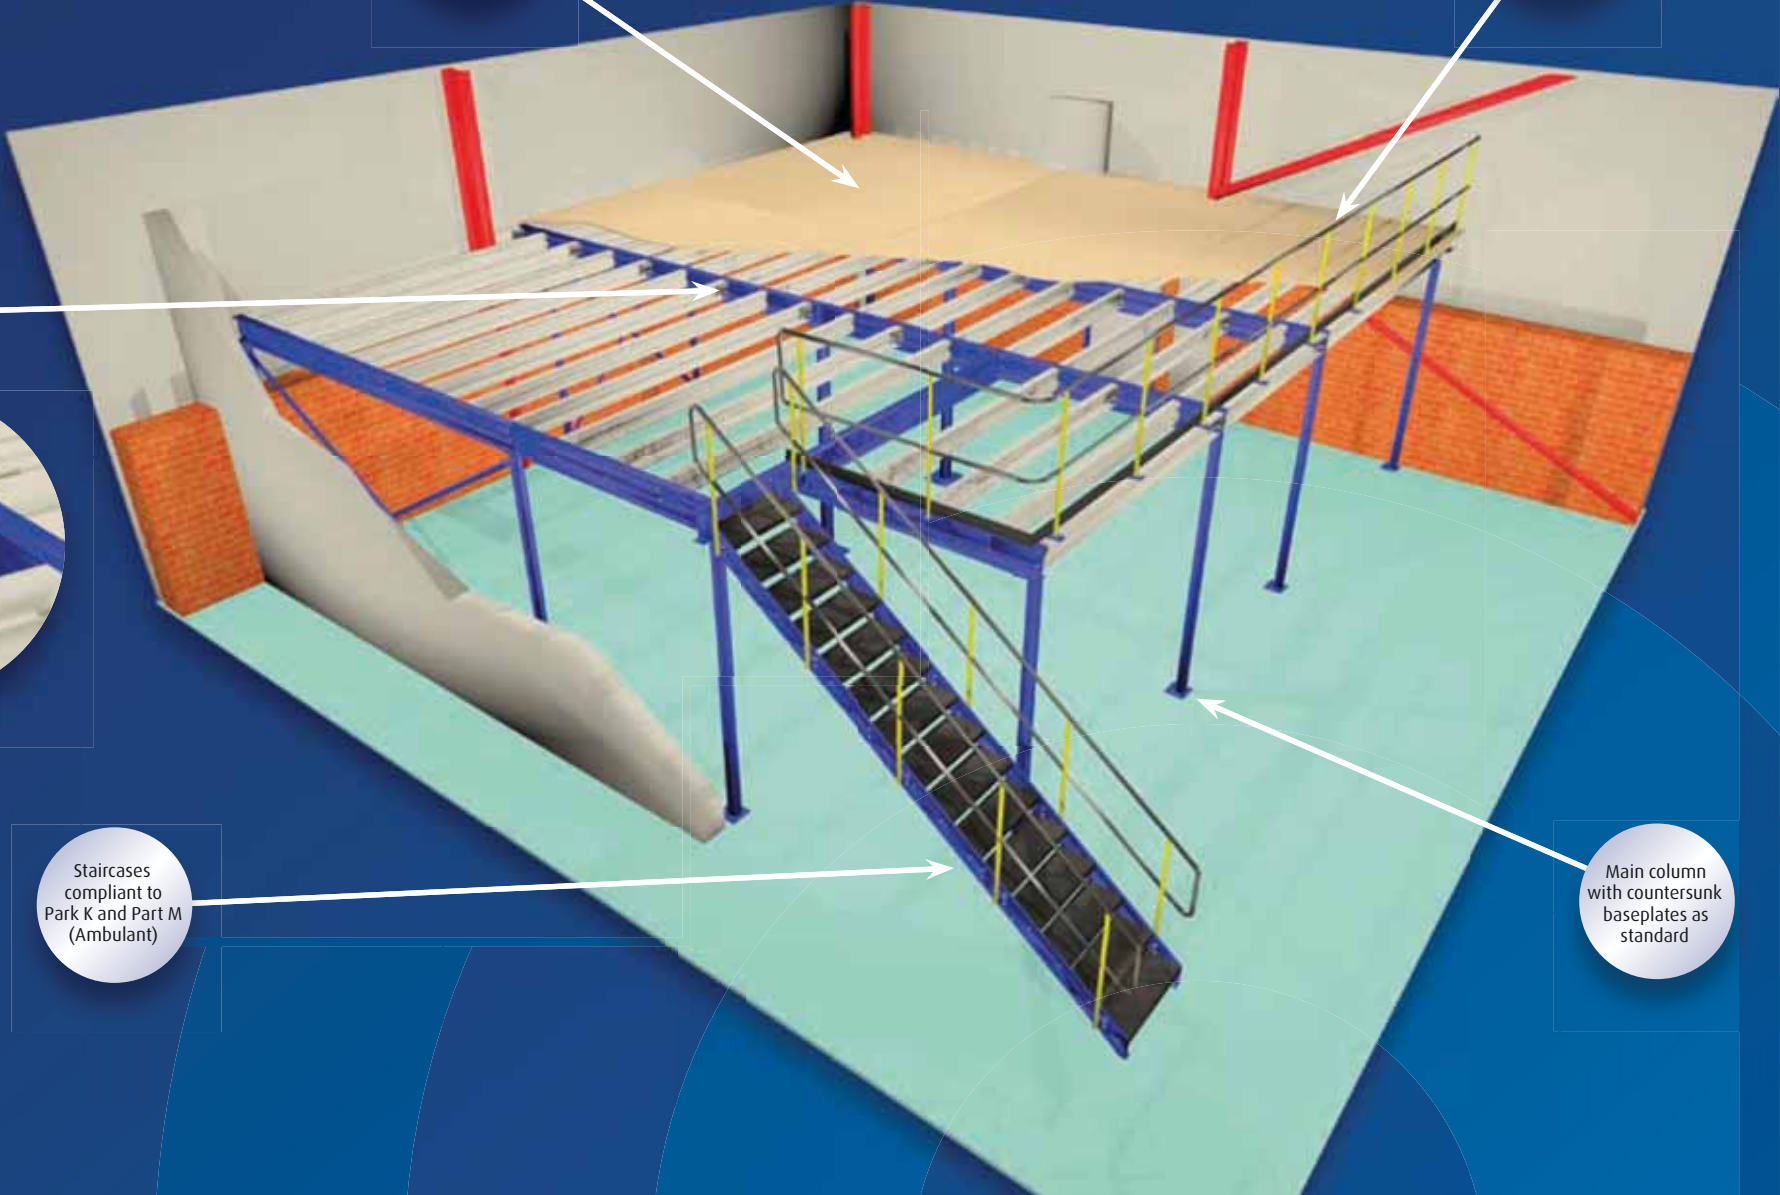

Handrail and safety edge protection

Standard connection between main and secondary beams

Staircases compliant to Park K and Part M (Ambulant)

Main column with countersunk baseplates as standard
