

Industry colour coding for absorbents

Absorbents are one of the most cost effective and efficient ways of containing and recovering spilt liquids. Having the correct type of products on site will allow you to manage any potential workplace spillage. To ensure that you chose the correct type

of absorbent, below is a simple guide to the colour coding and also see our absorbent compatibility guide on page 60 and 61 for a more comprehensive list of liquids that require spill management.

Maintenance Grey/Black

For use inside on spills of non aggressive Water and Oil based fluids and Mild Chemicals.

Oil Only White

For the preferential absorption of Oil based liquids on land or water. Including Vegetable Oil, Mineral Oil and most Hydrocarbon derivatives.

Chemical Yellow

For use on spills of aggressive liquids i.e. Acids and Alkalis. Can be safely used on Water and Oil based spills. For use on land only.

All of our absorbents are tested to BS7959 and meet the BS standards for the colour coding of absorbents.

MAINTENANCE

Maintenance absorbents are generally grey in colour. They are used for absorbing a wide range of non-aggressive oil and water based fluids, this can include oils, fuels, solvents, thinners, paints and mild cleaning chemicals.

The range includes a selection of formats designed to provide a safe and effective solution to most workplace spill scenarios. Absorbent socks are ideal for containing the spread of spilt liquids, pads can be used for the recovery of minor 'day to day' incidental spills and leaks around the workplace, pillows are ideal for

absorbing spills and leaks in hard to reach areas or placed in drip trays to recover collected liquids and finally perforated rolls, for recovering spills across a larger area or as a versatile option to pads. Each product is tested to BS7959 to ensure that they meet the highest performance standards.

SUSTAINABLE

Ecospill are leaders in the supply and manufacture of sustainable absorbents. Manufactured from natural fibres which have been refined and upgraded, our range of sustainable absorbents often outperform more traditional meltblown products.

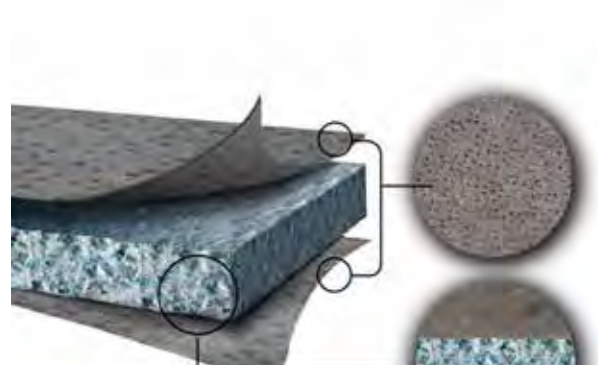

This equates to a significant reduction of up to 60% in its carbon footprint. Using sustainable absorbents does not mean compromising on performance. They are extremely fast acting, highly absorbent, do
