

Merlin Industrial Products Ltd have produced a strong but lightweight footbridge manufactured from aluminium that provides a solution to all requirements within the construction, groundwork and maintenance sectors within Europe.

These unique and innovative footbridges will provide safe, work and public access, whilst working over and around deep excavations, small rivers, streams and utility trenches.

The Footbridge has many additional safety features, including a unique 'diamond traction', non-slip surface. Along with lift handles they've also been manufactured with foldable handrails for easy transportation, handling and quick assembly. The Footbridge can be stacked securely and can be supplied in 3 various sizes, 2m, 4m and 6m.

Alternative materials can often be extremely heavy and costly to transport, or have a short life span. At Merlin Industrial Products Ltd we believe that by combining our skill in both engineering, and fabrication, our Footbridge is by far the most superior footbridge to date.

Key Features and Technical Details

- Length: 2m, 4m and 6m
- Weight: 72kg, 142kg and 207kg
- Maximum weight loading: 1850kg, 1500kg and 850kg
- Material: Aluminium
- Unique 'diamond traction' non-slip surface
- Stackable for storage and transport
- Foldable handrails for easy transport and assembly
- Anodised aluminium handrails
- Lift handles/Hooks
- High toe board
- Low transportation and handling costs
