**description**

# Levitate

The Levitate system comprises of desks, workbenches and high tables with a solid and durable supporting structure that consists of an A-type base and a frame to which a top is fixed. The system is complemented with suspended pedestals, a secretary box, panels and accessories.

## 1. Desks, workbenches, high tables

### 1.1. Top

The tops for desks and workbenches are available in two versions:

- fixed top – rectangular, rounded to a 100 mm radius on the user's side;
- sliding top that consists of two parts:
  - fixed part – rectangular top with fixed depth 220 mm,
  - sliding part – rectangular top rounded to a 100 mm radius on the user's side.

The sliding top ensures direct and easy access to the second storage level organiser. The sliding range of the top is 150 mm. Between the fixed part and sliding part there is an 8 mm functional gap that allows for channelling cables and ensures access to a media port (cable outlets and media ports are ordered separately).

A top for high tables is available in two versions:

- rectangular top, rounded to a 100 mm radius on four sides,
- oval top.

The 25 mm thick tops are available in the following options:

- melamine double-faced chipboard, class E1. The narrow desktop edge is protected with a 2 mm ABS edge band (for the BI and MB finishes a laser edge band is available as standard),

- plywood covered with linoleum on one side; the underside of the top is covered with counter-pressure laminate. The narrow top edge is protected with wax, which makes the plywood structure visible,
- chipboard veneered on one side; the underside of the top is covered with counter-pressure laminate. The narrow top edge is finished with natural edge band. The option is available only for the fixed part of the sliding top – this applies to a desk/workbench with a sliding top.

### 1.2. Second storage level organiser

This is an integral element of a desk and a workbench workstation with a sliding top. It is a functional and aesthetically pleasing place for storing personal items and office tools. It consists of a few trays with different dimensions, depending on the desk width. The organiser is made of thermo-formed felt with an optional media port (position of the media port: left or right).

**NOTE:** if you choose an organiser with a media port placed on the left, the assembly of a suspended pedestal will only be possible on the right side of a desk and vice versa.

### 1.3. Frame

The powder-coated frame is made of two 30 × 40 mm steel profiles. It is finished with a linking unit made of a 10 mm thick metal sheet. The unique structure of the desk frame allows for assembling:

- upper panels using metal handles,
- a second storage level organiser using plastic clips,
- a pedestal using a metal handle.

### 1.4. Legs

The A-type legs are made of solid oak wood finished with transparent varnish, which keeps the natural grain of the wood visible. The leg shape is slightly rounded on the outside. In cross-section, legs taper evenly towards the floor.

### 1.5. Height

The fixed height of desks and workbenches is 740 mm, while the fixed height of high tables is 1050 mm. Glides that allow for levelling in the range of +10 mm are available as standard.

## 2. Secretary box

The secretary box is a mobile element, so its location can be changed easily. The secretary box comes in two structural versions: it can be made of 12 mm thick melamine double-faced chipboard or 12 mm thick veneered chipboard. The powder-coated front of the secretary box is made of a 1 mm thick metal sheet. The front can pivot and slide at the same time.

## 3. Suspended pedestal

The suspended pedestal is available in two versions: with two or three drawers. The pedestal structure and front are made of 18 mm thick melamine double-faced chipboard. The drawers are equipped with a soft-closing system. The upper drawer of the pedestal is fitted with a square lock that has two keys. The pedestal chipboard drawers are always available in white. The pull-out of all drawers is 80%. The pedestal is fixed to the desk frame using a metal handle. Thanks to its universal structure, the pedestal

can be assembled either on the right or left side of a desk. The suspended pedestal can be equipped with an organiser made of thermo-formed felt as an option.

**NOTE:** if you choose a desk/workbench workstation with a sliding desktop and a left second storage level organiser, the assembly of the suspended panel will be possible only on the right side and vice versa.

## 4. Panels

The upper fully upholstered panels are fixed to the desk frame using metal handles. The panel structure consists of a wooden frame filled with a fiberboard core, which makes the panels pinnable.

Panels are available in two versions:

- for desks; the panel consists of two elements – 1190 mm height (the higher panel) and 1040 mm height (the lower panel).

- for desks and workbenches; the panel height is 1160 mm.

The panel height is measured from the floor and given in their upper position.

Workbenches are always suitable for integration with a panel (panels are ordered separately).

## 5. Seats

Seats are available in the following versions: one-person 400 × 400 mm and two-person 1200 × 400 mm, low and high. The height of high benches and bar stools is 736 mm, and the height of low benches and stools is 456 mm. Glides that allow for levelling in the range of +10 mm are available as standard.

# Levitate

## 6. Accessories

Accessories (organiser box, headphones hanger, document and catalogue shelf) are made of a 1 mm thick powder-coated metal sheet. Their structure ensures tool-free assembly. The accessories are hung on a panel or pushed onto a top.

## 7. Wire trunking

### 7.1. Horizontal wire trunking

Horizontal wire trunking is made of an upholstery fabric and fixed to the top using plastic connectors. The wire trunking is available in a few different widths; it can be assembled to desks and workbench workstations. The height of horizontal wire trunking is 120 mm.

### 7.2. Vertical wire trunking

Vertical wire trunking is made of an upholstery fabric and fixed to the top using a plastic handle. There is a zip along the whole length of the wire trunking, which allows for easy cable management. The 850 mm long wire trunking is designed for desks and workbenches. The 1200 mm long wire trunking is designed for a high table.

## Products made of natural solid wood

Wood is a heterogeneous material, therefore some natural differences between particular elements of a single product or individual models may occur, which makes each product unique and exceptional. The surface of each product, as well

as different surface areas of a single product, may cause different optical illusions. This is the result of the natural origin of the raw material and its anisotropic properties, which highlights the quality of the wooden products.

Wood of the same species can have different shades, colours, wood rings and grains depending on the habitat conditions of the tree from which the wood was obtained, as well as the part of the log of which a particular product was made.

## Important information about furniture in natural veneer

Veneer is a refined natural material with unique shades, wood rings and grains. Differences in the look of individual components of furniture pieces or between furniture sets are a natural feature. Small variations of surface colour are unavoidable and prove the natural origin of materials. Morphological elements in the wood, such as knots, uneven width of growth rings, presence of wood rays and colour differences, are due to the natural origin of raw materials and determine the uniqueness of the product. Exposure to sunlight can lead to a change of veneer colour over time. Depending on the intensity of sunlight, different pieces of veneered furniture may change colour in different ways. The properties of veneer resulting from the natural qualities of wood are not regarded as defects and cannot be the cause of complaint.

Due to the natural properties of wood and natural veneer referred to above, when extra pieces of veneered furniture are ordered to complement a previously owned set, variations of wood ring patterns and colours when compared to previously owned products may occur. Such variations between newly ordered and previously owned pieces of furniture cannot be the cause of complaint. To ensure patterns and shades are matched as well as possible across individual veneered elements, orders for natural veneer furniture must be placed at one time, on a single order form. This guarantees that the whole set of veneered furniture will be made of the same batch of raw materials. It should be noted that veneer is a delicate material with low resistance to scratching. Liquids and

high temperatures also have adverse effects on veneered surfaces. Any damage caused by inappropriate use of furniture may not be the cause of complaint.
