

# FIRE RETARDANT:

---

These sackholders have undergone extensive fire safety tests at the leading test house, Warrington Fire, to the standards required by the UK Government's Health Technical Memorandum 05-03 Part A (2008) Fire Safety in the NHS - Section 3.12 Healthcare Premises -General Fire precautions section 3.12.

# INFECTION CONTROL & SACKHOLDER FEATURES:

---

Our manufacturer has been at the forefront of Sackholder design in the UK with infection control being a continuous focus from customer feedback. These sackholders have been designed with key features to aid infection control:

## **Off the wall design:**

All of these sackholders are designed to sit away from the wall preventing wall damage. Apart from the huge cost of repairing the damage it is also somewhere that can harbour infection.

## **Easi-clean design:**

These sackholders have been designed around being easy to clean and have few areas where dirt can gather.

## **Hands Free Lids:**

The lids are designed to sit inside the frame at the top of the sackholder which stops anyone touching or opening the lid by hand. This is an infection control method and leaves the unit only operable by the foot pedal.

## **Easi-clean Bungee Bag Holder:**

The bungees are specially designed to be easily cleaned due to a special sheathing (containing polyester, nylon and multi-filament polypropylene). This aids hospital infection control and makes them extremely hard wearing.

## **Silent Closing Lid Options:**

This reduces the speed that the lid closes making the bin quieter. However it also reduces any displacement of particles from the bin into the air and surrounding environment helping hospital infection control.

## **Anti-microbial Paint Option:**

This option helps hospital infection control as it adds an anti-bacterial element to the paint within our products which helps prevent the spread of bacteria.

# FIXED BODY SACKHOLDER

- » Fire retardant to HTM 05-01 Part A
- » Corrosion resistant
- » Infection control friendly design
- » 100% Recyclable

## PREMIUM METAL RANGE

# FIXED BODY STANDARD LID

(HAND AND PEDAL OPERATED)

Add any option:

- » Silent closing
- » Antimicrobial coating
- » Metal bag retainer
