

Fork Mounted Wheelie Bin Handler (WBH-1100L)

In order to pick up the bin for transportation, ensure that the truck mast is in the vertical position, and the trunnion safety latches are open. The truck forks must then be positioned at a height such that the attachment trunnion slots pick up the bin lifting trunnions. Raise the attachment until the trunnions on the bin are sitting in the bottom of the trunnion slots. The Trunnion Safety Latches can now be closed and pinned.

Adjustable catch sections allow for small variance on the bin widths. To adjust the width of the unit loosen the hand knobs and slide the catch across in the desired direction. Ensure knobs are tightened before use.

These Wheelie Bin Handlers are designed to handle 1100 litre flat lid wheelie bins. The handler has an adjustable catch section to allow slight variations in bin widths to be handled. Operation can be carried out remotely, without ever leaving the truck.

It is highly recommended that a sample bin be sent so as the attachment can be adequately tested.

Model Ref.	Capacity	Weight	C of G	Load Centre
WBH-1100L-STD	500kgs	125kgs	850mm	1185mm
