

CLEANING AND MAINTAINING CANTEEN UNITS

Cleaning

Our canteen units are very robust and do not require any specialist cleaning or maintenance equipment.

We recommend that you do not use abrasive cleaners , bleach or excessive water on the tops or bases and a good antibacterial nonabrasive cleaning fluid on a dampened cloth will protect the table tops and seats for years.

The quality epoxy powder coated paintwork protects the fully welded steel frame and over the years the paint on the feet can get chipped allowing water ingress and possible corrosion so the best technique is to move the unit and clean where the legs have been or use non-metallic mops to prevent damage to the bottom of the legs.

Maintenance

Periodically check fastenings for table tops and seats for any signs of loosening and tighten accordingly.
